

#### 780UT EK CHAIN

Founded in 1941 as a general roller-chain manufacturer, Enuma Chain is headquartered in Kaga, Japan, an industrial area near Komatsu on Japan's west coast. Long a technological innovator, in 1974 Enuma introduced the world's first sealed O-ring chain, a design that dramatically extended chain life by inhibiting lubricant loss. This breakthrough quickly became the standard throughout the motorcycle industry, and led to today's high-tech EK Quadra-X Ring chains that further prolong durability while reducing friction.

But motorcycle chains are only part of the story. Enuma chains can be found throughout the world in a variety of applications, including farming equipment, conveyor systems, vending machines, automobiles and a variety of manufacturing environments. Among Enuma's major customers are Kawasaki, Kubota (construction equipment), Iseki (tractors), Matsushita Electric and Mitsubishi.

Quality is an obsession at Enuma Chain. In 1997, the company was certified to ISO 9001 qualitymanagement standards. This certification recognizes the high standards of our quality assurance system, and reinforces our quarantees of safety and precision in every product we sell.

Research and development at Enuma have always focused on creating technological breakthroughs and developing original ideas. Our invention of the O-ring sealed chain was based on years of accumulated technology, exemplifying a relentless commitment to innovation that continues to drive everything we do.

Solid bushings and rollers are EK Quadra-X Ring precision centerless ground seals reduce friction and shot-peened, to minimize by 50% compared friction and maximize strength. to conventional Orings. They keep Sideplates made of dirt out and the high-strength, heathigh-tech grease in. treated alloy steel to resist chain stretch. Protruding bushings help extend O-ring life and inhibit kinking. Sideplate holes reduce weight, lower friction, Pins are quad-staked dissipate heat, extend to the sideplates for

reliability.

EK Chain's new Zero Stretch Technology virtually eliminates measurable chain stretch in the first 1000km of use. ZST puts an end to the hassle of retensioning the chain after the initial break-in period, when most chain stretch occurs. For racers, this can mean going several race weekends without a single chain adjustment. You also get the confidence of knowing that a chain with ZST will stay within wear tolerances throughout its entire service life. ZST is standard on the 530ZZZ chain, and available as an option on the 520RXO chain and all MVXZ series chains

O-ring life, and facili-

tate self-cleaning

#### EK QUADRA-X RINGS VS. O-RINGS

No one knows more about sealed chains than EK. After all, we invented the O-ring chain for motorcycles way back in 1974. Since then, we've improved on our invention with the revolutionary Quadra-X Ring seal. The Quadra-X Ring reduces friction by as much as 50 percent, thanks to its smaller contact area. Yet it offers even better sealing than a conventional O-ring, because it has twice as many contact points between the ring and sideplates. It's the optimal combination of maximum sealing protection with minimum friction.

Many sealed chains are a trade-off: In the quest for low friction, the quality of the seal between the rings and sideplates is compromised. While such chains may offer lower friction initially, their loose tolerances ultimately lead to lubricant loss, premature wear, and increased friction in the long run. EK Quadra-X Ring chains combine reduced friction and long wear—lab tests show that they last 50 percent longer than standard O-ring chains.

### 

EK O-ring and Quadra-X Ring Chains are warranted against defects in materials and workmanship for 24 months/unlimited mileage (street use) or 12 months/unlimited mileage (off-road use). The warranty period begins on the date shown on the sales invoice or receipt. This warranty is void for any use other than those applications recommended by EK Chain. This warranty does not cover the use of EK Chains in competitive events, or on motorcycles that have been modified.

## **COLOR CHAINS!**

You've seen them on the pros' bikes. Now you can get a color chain for your bike. But not just any chain – these are championship-winning EK Chains. The following chains are available in a selection of durable, powder-coated colors, for road, off-road and ATV applications: 530ZVX, 520/525/530MVXZ, and 520MRD.

### EK O-RING INSTALLATION SPACERS

Included with every 520, 525 and 530 O-ring and Quadra-X Ring chain is a pair of spacers that help prevent damage to the sealing rings during installation of the connecting link. These spacers set the correct spacing between the inner and outer plates while riveting the connecting link, ensuring that the Orings seal properly and aren't under excessive pressure. Only EK Chain makes chain installation this easy.

#### EK SCREW-TYPE MASTER LINK

You don't need special tools to install your new EK Chain. This unique, patented link gives a rivet-like fit, using only an 8mm wrench and a pair of pliers. It's available as an option on many EK Chains.

## EK PROFESSIONAL CHAIN TOOL

Like EK Chains, this professionalquality tool is made of only the finest materials, Machined from a solid billet of hardened steel, it's designed for a lifetime of service. The EK Chain Tool can be used to drive out pins when removing old chains, and for connecting your new chain with the included clamping plates. It's the best way to ensure secure installation of your new EK Chain.

## FRECUENTLY PSKED QUESTIONS

#### How can I tell when I need a new chain?

The quickest method to determine if you need a new chain is to grasp one link that's in contact with the rear sprocket, while the bike or ATV is not running. If you can pull the link more than halfway off a sprocket tooth, it's time for a new chain.

If you have regularly adjusted chain slack as part of your bike's routine maintenance, your chain is due for replacement when your rear-axle adjusters reach the "replace chain" markings. Refer to your owners' manual if unsure.

But if your chain makes noise while riding, or if you find your rear wheel is covered with dirty chain grease, chances are your chain needs replacement. When cleaning your chain, take time to closely inspect the seals and rollers. If you find any broken seals or cracked rollers, replace your chain immediately.

#### How often should I lube my chain?

Sealed chains should be lubed every 300 miles (500km). Non-sealed chains, especially those used off-road or under other demanding conditions, should be cleaned and lubed more often.

#### What kind of chain lube should I use?

Sealed chains should be lubed only with lubricants specifically marked as being suitable for O-ring chains. A good chain lube should adhere well and have good penetrating qualities to get deep inside the spaces between bushings and rollers. Non-sealed chains may be lubed with any quality chain lube, or SAE 80/90 wt. oil.

#### What should I use to clean my chain?

Never clean your sealed chain with pressure washers, steam cleaning, wire brushes, or volatile solvents such as gasoline, mineral spirits, contact cleaner, acetone or WD-40, all of which can damage the O-rings. Kerosene may be safely used for cleaning, provided you have adequate ventilation and no ignition sources nearby. Commercial spray-on chain cleaners typically must be rinsed off with water. This could lead to the formation of rust, so use of these products is discouraged.

#### How much chain slack should I have?

Always follow the vehicle manufacturer's recommendation for chain slack. Typically this is 1 to 1.4 inches (25 to 35mm), though specific bikes may require more or less. To check the slack, choose a point on the bottom run of the chain, midway between the two sprockets. Pull up and push down on the chain as far as it will go, and measure the distance between the highest and lowest points.

Too much or too little slack can both cause a chain to fail. If in doubt about your bike's chain slack, have it adjusted by a professional mechanic.

#### How do I count chain links?

Every pair of sideplates – both inner and outer – counts as one link. If your bike is supposed to have a 110-link chain, count every single inner and outer plate on one side of the chain until you reach 110.

Chains will always have an even number of links. If your uninstalled chain has inner plates on both ends, or outer plates on both ends, you've miscounted.

#### Is there a break-in period for new chains?

There's no break-in period per se, but you should always check a new chain's adjustment after 50 miles (80km) of use, and again after 200 miles (320km).

#### What's the difference between 520, 525 and 530 chains?

The numbers indicate a chain's dimensions, tolerances, minimum tensile strength and other specifications.

The first digit (4, 5 or 6) denotes a chain's pitch – the center-to-center distance between chain pins. Originally these numbers specified pitch in eighths of an inch (i.e. a 400-series chain had a pitch of 4/8, or 1/2 inch), but now metric dimensions are used. A 400-series chain has a pitch of 12.7mm. A 500-series chain has a pitch of 19.05mm.

The second and third digits indicate the chain's width, measured between the inner sideplates. An EK chain ending in '20' measures 6.35mm between the plates. If the number ends in '25' or '28', the dimension is 7.94mm. If the number ends in '30' or '32', the width is 9.53mm.

Because wider chains are typically stronger as well, the second and third digits also indicate a chain's strength, relative to other chains with the same pitch. Higher numbers correspond to greater strength, i.e. a 525 chain is stronger than a 520.

You should always replace your old chain with one having the same number. Never replace a sealed chain with a non-sealed chain.

We strongly recommend these Quadra-X Ring chains as the ideal replacement for the original equipment chain on your 600 to 1000cc sportbike. Features like solid bushings, lightening holes in the sideplates, large-diameter pins, and friction-reducing Quadra-X Rings help ensure high-performance and durability. MVX chains are available in colors (see page 3).

Zero Stretch Technology is available as an option with MVXZ chains.

Anyone with a Hayabusa, ZX-12 or one of the new generation of 180hp literbikes knows how hard they are on chains. EK steps up with an incredibly strong Quadra-X Ring chain that has proven its superiority in controlled lab tests. ZVX chains are also great for any bike that's been modified for more-than-stock horsepower. The 530ZVX is available in colors (see page 3).

EK MRD and MRDL non-sealed chains are the same ones that the Amsoil/Chaparral/Factory Connection/Honda team of Kevin Windham and Mike LaRocco used to win six AMA Supercross main events in 2004. Our 420SH and 428 SHDR provide this same winning performance for smaller-displacement bikes. The 520MRD chain is also available in colors to match your bike (see page 3).

EK racing chains are the choice for ultra high-performance and critical racing applications. Every aspect of these chains has been designed to minimize friction, reduce weight and maximize strength. Our Race series features lightening holes and EK's exclusive Quadra-X Rings in sealed chains, and advanced metallurgical science makes EK racing chains stronger, lighter and smoother-running than any chain we make.

ZERO STRETCH TECHNOLOGY

Zero Stretch Technology is available as an option with the 520RXO chain.

# POR GOOD OF THE PROPERTY OF TH

EK drag racing chains can rightfully be called the fastest chains in the world. Top Fuel champion Larry "Spiderman" McBride set a world record E.T. of 5.86 seconds using the EK 630SHB chain. The EK 530DRZ has achieved a terminal velocity of 344.048 mph on Sam Wheeler's E-Z-Hook Streamliner at the Bonneville Salt Flats. The EK 530DRZ is also the choice of more top NHRA Pro Stock motorcycle racers than any other chain.

HOW TO USE THIS APPLICATION CHART: This is a listing of EK replacement chains for many popular bikes, based on manufacturer-supplied data, but is not guaranteed to be accurate in all cases. The "Recommended" chain for each bike is our best recommendation based on such factors as horsepower, drivetrain friction and durability. "Value" and "Economy" chains are acceptable substitutes when cost is a consideration, but will not offer the same performance or durability of our Recommended chains. Always confirm correct chain size and length with your owners manual or dealer. This data does not apply to motorcycles that have been converted to non-stock chain sizes or otherwise modified. Always have your chain installed by a competent, professional motorcycle mechanic.
