

POWER **PURE**

*THE LIGHTEST DUAL-COMPOUND
SPORT TIRE EVER*

LTT
LIGHT TIRE TECHNOLOGY

MICHELIN® Power Pure™ tires are some two pounds lighter per pair* than other comparable sportbike tires, without compromising durability or performance. LTT reduces unsprung weight and rotating mass, benefiting acceleration, braking and grip.

2CT
TWO COMPOUND TECHNOLOGY

The center tread compound withstands aggressive acceleration and braking, while the shoulder compound helps ensure outstanding grip on road or track. When you lean your bike into a turn, 2CT puts this grippier rubber in touch with the asphalt.

*Average weight of a set (120/70ZR17 and 190/50ZR17) of MICHELIN® Power Pure™ tires, compared to the average weight of a set of the following comparable tires: Bridgestone BT-016, Dunlop Sportmax Qualifier II, Metzeler Sportec M3 and Pirelli Diablo Rosso.
